Pings™
A BAMBOO HEALTH SOLUTION

WITH SMART ROSTERS

Easily monitor patients in real time to succeed in bundled payment programs

Smart Rosters are dynamic patient rosters that allow your organization to define notification criteria about your patients. Smart Rosters enable you to track those patients in real time as they seek care across our national admission, discharge, and transfer (ADT) network. By enabling timely care coordination and intervention in real time, the solution helps you succeed under CMS's Bundled Payments for Care Improvement Advanced (BPCI Advanced), Comprehensive Care for Joint Replacement (CJR), Oncology Care Model (OCM), and other bundled payment initiatives.

Use Smart Rosters To:

- Prospectively identify patients likely to belong to bundled programs and receive real-time notifications when those patients transition across the care continuum.

- Access critical patient information at the point of care, including in- and out-of-network prior utilization history, diagnosis information, and care team information.

- Monitor post-acute care (PAC) utilization and identify opportunities to reduce unnecessary readmissions and length of stay (LOS).

- Apply timely interventions for patients at risk of hospital readmissions.

- Ensure seamless transitions from inpatient care settings to PAC facilities by creating visibility into patient events for treating providers and care team members.

- Evaluate patients' reasons for readmissions, based on which healthcare services patients received after hospital discharges.
