# Bamboo Health

Pings™
A BAMBOO HEALTH SOLUTION

HEALTHCARE'S FIRST AND MOST ADVANCED E-NOTIFICATIONS SYSTEM

Bamboo Health's comprehensive suite of solutions supports thousands of hospitals, health systems, accountable care organizations (ACOs), post-acutes, health plans, provider organizations, health information exchanges, and community providers across the country to transform the way care is delivered.

Pings delivers real-time notifications whenever your patients experience care events—whether they are at a hospital, emergency department (ED), or post-acute (SNF, LTACH, HHA, IRF, hospice) setting. The solution allows you to scale how you manage patient populations. Pings can also be embedded within your existing workflow systems or used natively through our web and mobile interfaces.

HITRUST® CSF Certified

Bamboo Health operates entirely within the privacy and security requirements set forth with HIPAA, including the encryption of all data in transit and at rest. Pings is also HITRUST CSF® Certified, meeting industry-defined standards when it comes to managing risk.

Optimize Care Transitions

We help ACOs improve the quality of care for patients while simultaneously succeeding under value-based care initiatives. Below are the 2019 Next Generation ACO results.

$263,780,912

Earned in shared savings through our national network of ACOs under the Centers for Medicare and Medicaid Innovation's (CMMI's) Next Generation ACO Model in 2019.

93%

Average pay-for-performance quality score achieved by our customers.

Improve Patient Outcomes

Leverage real-time data across your entire organization to make smarter, faster, and safer transition-of-care decisions.

Real-time notifications when care events occur to intervene before patients go back to the community.

Smart Flags to highlight readmission risk, ED high utilizers, among others.

Smart Rosters allow you to define notification criteria for patients that are most important for your organization to follow (e.g. Medicare discharges in past 30 days).

Multiple integration options including HL7 Data Feed, Single Sign-On, and System Integration.

View additional context on patients, including diagnoses and care teams, and set up targeted alerts when patients meet certain user-customizable criteria.

Customer Testimonial

HOUSTON
Methodist®
THE WOODLANDS HOSPITAL

"We received a Ping on a patient who was admitted to a SNF in Connecticut. The patient had received inpatient care while in Connecticut and was then discharged to a SNF to receive care for her injury. Our team was able to connect the family with a PCP in Connecticut, and we relayed this information back to the patient's PCP in Texas. Without [Pings], our team and the patient's PCP would have been unaware of the patient's care event. Additionally, we would not have been able to facilitate a follow up with the patient or connect her with the services she needed."
