

Rising Risk

Identify Rising-Risk Patients & Decrease Time to Intervention

Care coordinators rely on lagged claims data to manage cost of care for high-risk and rising-risk patients. Much can happen during the 60-90 day claims lag, resulting in delayed intervention, missed care opportunities, and avoidable costs. Rising Risk helps users proactively identify emerging high-priority patients in real time and offers a workflow to help manage both their care and costs.

Use Rising Risk to:

- Identify your rising-risk cohort in near real-time
- Conduct targeted post-discharge follow-up to successfully enroll patients in care management programs
- Connect with hard-to-reach patients via in-app SMS contact sharing
- Improve patient outcomes for your rising-risk cohort while achieving significant cost savings

Our Value Add:

UNIQUE DATA SET

Industry leader in care collaboration using real-time admission, discharge, and transfer (ADT) data

ADVANCED ANALYTICS

Adjusted risk scoring model that improves with user input through predictive analytics and machine learning

WORKFLOW SOLUTION

Software solution to streamline patient prioritization and post-discharge follow-up workflows
