

## SURGICAL HEALING ARTS CENTER CASE STUDY

### THE CHALLENGE

**Surgical Healing Arts Center** needed to improve its access to E-FORCSE®, Florida's Prescription Drug Monitoring Program (PDMP), and query PDMP data from other states. Many of the practice's patients are dual residents or visitors to the state, making it imperative to view the patient's prescription history in their home state.

Bariatric surgery patients typically have high pre- and post-operative prescription rate for opioids. Before the integration, the clinicians at Surgical Healing Arts Center sometimes struggled to accurately track prescriptions written by other providers. When the state mandated verifying the PDMP within two days of controlled substances prescription, the practice sought a technology solution that would fulfill the state's requirements while also improving patient care.

### ABOUT THE CUSTOMER

- Offers bariatric surgery, including sleeve gastrectomy and gastric bypass, as well as non-surgical patient support
- Office located in Fort Meyers, Florida
- Uses eClinicalWorks cloud-based EHR solution

## THE SOLUTION

Surgical Healing Arts Center worked with Bamboo Health to integrate E-FORCSE with eClinicalWorks using Bamboo Health's PMP Gateway integration platform and NarxCare advanced analytics tool that provides patient risk analysis and other information in a visually interactive format that helps prescribers provide better patient safety and outcomes.

## THE IMPACT

With the PDMP-EHR integration, physicians avoid the tedious process of exiting the EHR, logging into the PDMP and running a query, and **saves several minutes for each patient**. It's now such a quick process—around five seconds—that they can execute it during a patient encounter, without sacrificing face-to-face interaction. **Physicians can also confidently prescribe knowing that a patient's entire history has been consolidated**. This is especially important considering many patients are dual residents or visitors to Florida. Lastly, **they can better communicate with insurance companies when they scrutinize the quantity of pain medication prescribed to bariatric surgery patients**. Having such a comprehensive historical view of each patient makes it easy to justify prescribing patterns to payers.

Health Information Management -  
General & Bariatric Surgery First Assist  
Surgical Arts Healing Center

*"It's our responsibility to preserve the health of patients. When you treat a patient, you need to really know your patient. We talk to them about overdose risk and options for pain management. Being able to see the overdose risk score and other discreet data allows us to better understand their needs.*

*This integration made a huge change. It takes us just two clicks. The visualization and the risk score presentation is very clear. It's also an essential risk management tool and resource. We have more control over our prescribing practices. This tool helps us ensure we do no harm and over-prescribe."*
