

## Care Coordination Solutions for Health Plans

Managing high-risk populations is an ongoing challenge in a value-based care world. Reducing unnecessary emergency department visits, preventing avoidable admissions and readmissions, referring members to appropriate care, and improving connectivity to community-based providers post-discharge all contribute to cost-efficient care.

Bamboo Health has experience working with health plans from the Commercial, Medicare Advantage, and Medicaid spaces that focus on care management, utilization management, and quality initiatives. Our solutions help health plans coordinate and impact member care by enabling:

-  **Greater visibility into members' care histories and plans**
-  **Better payer-provider collaboration for more informed care**
-  **More cost-efficient management of care**

Our solutions supporting Health Plans:

### Pings

Pings is a care coordination platform that provides real-time notifications of member encounters and delivers relevant historical patient information to the point of care allowing payers, providers and care teams to better manage targeted members and drive collaborative, high quality, cost-effective care.

### OpenBeds

OpenBeds is a comprehensive behavioral health capacity management and referral technology solution that creates a trusted, coordinated behavioral health care network to ensure patients are receiving the right care at the right time, saving time and dollars in the process.

### Crisis Management System

Our Crisis Management solution provides a real-time connection between the public, crisis call center professionals, mobile crisis response teams, and treatment providers. It allows health plans to have situational awareness and connection to all crisis stakeholders so they can connect consumers to definitive care quickly, finding the proper treatment, at the right time, saving money and unnecessary emergency department utilization.

### Justice Involved

Care Management for justice-involved members is critical to manage health outcomes and cost for this high-risk population. Justice-involved alerts are real-time notifications of member incarceration and release, allowing payers to engage members in care management and identify support resources to help improve health and reduce recidivism.
