

FOR FQHCs

Optimize Care Coordination Outcomes and Patient Engagement

LEVERAGE REAL-TIME NOTIFICATIONS TO GAIN VISIBILITY INTO PATIENTS' HOSPITAL CARE EVENTS

Bamboo Health is one of the nation's leading care coordination platforms that enables Federally Qualified Health Centers (FQHC) to coordinate with their hospital partners in order to effectively manage and engage their patient populations and foster seamless follow-up care post-discharge.

Use Pings To:

Ensure timely post-discharge follow-up care and increase patient engagement by leveraging updated contact information for difficult-to-reach patients

Identify Emergency Department (ED) high utilizers and multi-visit patients to effectively manage vulnerable populations via admission, discharge, and transfer (ADT) data

Surface primary care attribution, social determinants of health information, and care coordination instructions to treating clinicians at the point of care in the ED and hospital

“With access to Pings, we have the real-time information that we need about our patients and their events. So often in today’s healthcare system, providers are siloed and struggle to see the whole picture of a patient’s care journey. The Pings solution bridges these gaps for us. With Pings, we’re notified whenever patients have care events across acute and post-acute settings. With this information, our team can easily collaborate with one another, proactively engage with patients, and monitor them appropriately.”
