

A BAMBOO HEALTH SOLUTION

FOR RISK-BEARING PROVIDERS

## Optimize Care Transitions and Improve Patient Engagement to Succeed in Value-Based Care Initiatives

Bamboo Health's Pings solution provides real-time patient insights from admission, discharge, and transfer (ADT) data that enable risk-bearing providers like accountable care organizations (ACO) and provider organizations (PO) to have the needed visibility into patient events to improve quality, reduce total cost of care, and succeed under value-based care programs.

### Use Pings To:

- Identify high-utilizing patients in real time to reduce costs and preventable readmissions
- Apply timely interventions to reduce ED-to-inpatient conversions
- Monitor utilization to reduce post-acute length of stay (LOS)
- Gain insights into post-acute activity to strengthen and refine networks
- Reduce out-of-network utilization to improve continuity of care
- Identify patients eligible for the skilled nursing facility (SNF) 3-Day Rule Waiver
- Increase transitional care management (TCM) and complex care management (CCM) visits/billing rates

*"Pings was and is an invaluable tool helping us to seamlessly deliver coordinated care at the right place at the right time for our patients. It allows us to connect in real time with partners in our patient's care team that were previously invisible to us because we simply didn't know where our patient had gone. It's a simple, but eloquent solution to some of the pitfalls with managing patients across the care continuum."*

**– Medical Director,  
Pioneer Valley ACO**

### Our Impact

#### MSSP ACOs

Bamboo Health partners with 6 of the top 10 ACOs to earn the most shared savings in 2020, resulting in over \$1B in shared savings.

#### NextGen ACOs

Bamboo Health partners with 10 of the top 20 ACOs to earn savings in 2019, resulting in \$260M in shared savings.

#### Reduced LOS

One Bamboo Health ACO customer in Texas reduced 30-day hospital readmission rates for its preferred post-acute network by 24.7% and average LOS by 27.5%.
