# Bamboo Health

Enroll

INCREASE MEMBERSHIP ACTIVATION AND ACQUISITION

Our Enroll solution is a managed service that engages 7,000+ acute and post-acute facilities nationwide. It runs on a purpose-built platform that can instantly notify, qualify, prioritize, and automate contact with hard-to-reach members or patients. Agents experienced with your population act as an extension of your team, using real-time notifications on members or patient admissions, discharges, and transfers (ADTs) to enroll and schedule the initial visit with your program, directly upon discharge from the hospital. Data around the correlation between encounter, engagement, and outcome shows results within weeks.

Focus on Delivering the Right Care

As a health plan, accountable care organization, or any risk-bearing provider, you impact cost and quality outcomes only on those individuals engaged in your care program. Enroll activates non-engaged members or patients upon care transition so that you can focus on delivering the right follow-up care.

For fee-for-service providers, contracting with payer clients is the first step. Identifying and bringing eligible members or patients to your front door is the only way to deliver appropriate care and generate billable visits.

Enroll can be implemented in as little as two weeks by following these simple steps:

1. You facilitate a roster of non-engaged, eligible members, or, we can dynamically identify and enroll patients with diagnosis-based screening criteria.

2. We agree on a handoff point from our team to yours, ensuring agents are trained and have a preferred script.

Once the program is up and running, we charge only per incremental member enrolled, based on value.

Bamboo Health

Features

Tech-Enabled Workflow
Based on best practices used by hundreds of care programs, providers, and plans.

Point-of-Care Tech and Activation
7,000+ established provider relationships to drive program awareness.

Real-Time Infrastructure
Network-wide event alerts to instantly qualify, prioritize, and assign transitions.

Data-Driven Optimization
Analytics team mining correlations across Pings, engagement rates, and outcomes.

Purpose-Built Tech and Team
Auto assignments, embedded notes, and auto dialing with rigorous quality control.
