

A BAMBOO HEALTH SOLUTION

FOR HOME HEALTH

Manage and monitor patient populations across the entire care continuum

Bamboo Health is one of the nation's leading care coordination platforms that reduces the cost of healthcare by seamlessly connecting providers across the entire care continuum, both inside and outside of your network, so that your home health agency (HHA) can more effectively manage its patient populations.

Use Pings To:

- Capture hospital referrals through real-time discharge notifications, ensuring timely follow up and appropriate transitions of care.
- Prevent LUPAs and PEPs by receiving real-time alerts on ED presentation to proactively engage the patient and pull them back to your HHA if clinically appropriate.
- Strengthen referral relationships with your ACO and health system partners by providing visibility into patient care transitions and notifying them when one of their patients enters your HHA.
- Properly allocate field staff by identifying where patients are in real time to reduce the number of empty house visits.
- Receive real-time notifications on patients' care events (presentation, admission, transfer, or discharge) via SMS, email, and on the Pings web application.

How can we help improve home health performance?
Tell us your needs.

“We care for elderly, frail, and homebound patients via house calls. Locating these patients through Pings, and having the opportunity to coordinate care upon discharge, is critically important. Pings has increased the amount of information we had on our patients tenfold, which allows us to identify and manage our high-utilizing patients.”

– VP of Visiting Physician Services, Visiting Nurse Association Health Group
