

FOR KIDNEY CARE

## Succeed under CMS's Kidney Care Choices with Pings

Kidney Care Choices (KCC) is a CMS value-based care program designed to reduce total cost of care for Chronic Kidney Disease (CKD) and End-Stage Renal Disease (ESRD) patients, while promoting increased care coordination, ensuring later and better starts on dialysis, and increasing the number of successful kidney transplants.

Bamboo Health's Pings solution supports provider success in KCC by providing real-time visibility into patients' care events through admission, discharge, and transfer (ADT) notifications, allowing providers to efficiently engage CKD and ESRD patients and effectively coordinate their care.

### Use Pings To:

- ❁ Reduce total cost of care by preventing avoidable readmissions, reducing unnecessary hospital utilization, and optimizing site of care (e.g. dialysis)
- ❁ Receive input into risk stratification to identify patients at risk of "crashing" into dialysis or kidney failure
- ❁ Divert non-crashing patients from the ED to other clinically appropriate settings in order to improve the transition to dialysis, reduce costs, and improve care outcomes
- ❁ Facilitate seamless transitions of care and discharges through post-discharge follow-up to update care plans, ensure medication reconciliation, and schedule appropriate appointments with nephrologists, dialysis centers, or other providers
- ❁ Ensure top performance in quality measures measured under KCC, including gains in patient activation, depression remission, controlling blood pressure, and ensuring optimal ESRD starts by engaging patients post-discharge and optimizing encounter efficiency in order to maximize your performance-based adjustments or shared savings
