Smarter, Faster & Safer Transitions of Care

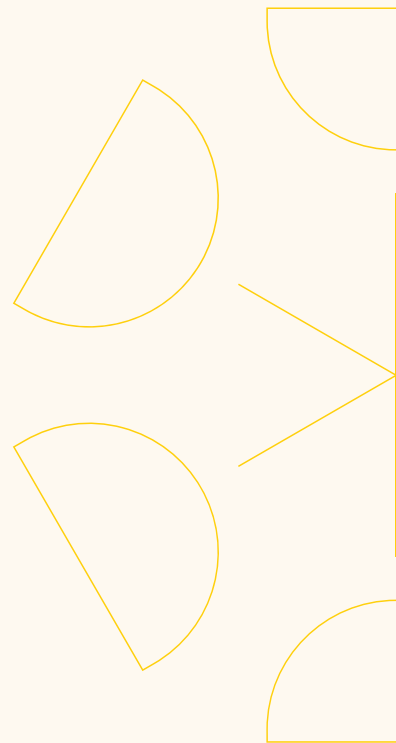

RECEIVE REAL-TIME PATIENT CONTEXT WITHIN WORKFLOWS AT THE POINT OF CARE

Without easy access to prior utilization history, care team attribution, available community resources, and high-value treatment information like care plans, the quality and efficiency of care transition decisions can suffer.

Bamboo Health, one of the nation's leading care coordination platforms, provides hospitals with a care transition assistant solution that can be embedded right within existing workflows to help clinicians direct patients to outside resources or the next most appropriate care setting. This helps clinicians make smarter, faster, and safer care transition decisions resulting in improved patient throughput, less low-acuity care, and better patient outcomes.

Use Stories To:

-  Receive relevant patient context in clinical workflows at the point of care
-  Improve inpatient and emergency department throughput
-  Reduce unnecessary, low-acuity care by directing patients to the most appropriate care setting
-  Increase quality and patient satisfaction through improved discharge planning and enhanced collaboration with community partners (e.g., FQHCs, ACOs, POs, Behavioral Health providers, etc.)
-  Prevent medically avoidable admissions and readmissions
-  Identify previous and active post-acute providers to streamline patient discharges
-  View in- and out-of-network patient utilization history and diagnosis information

Bamboo Health operates entirely within the privacy and security requirements set forth with HIPAA, including the encryption of all data in transit and at rest. Stories is also HITRUST CSF® Certified, meeting industry-defined standards when it comes to managing risk.
