

Discharge Summaries

ADDING CLINICAL CONTEXT TO PINGS

Improve Outcomes and Lower Costs with Effective Post-Discharge Follow-Up

Clinical data is often fragmented and a significant amount of detective work is often required to get important discharge summary information – either by needing to communicate directly with the hospital or the patient/family. Bamboo Health now offers seamless access to Discharge Summaries for care coordinators and providers via our Pings platform. Reduce treatment gaps, duplication of services and arm the follow-up provider with critical discharge summary information to reduce the risk of readmissions.

Use Discharge Summaries To:

- Access Discharge Summaries from the leading interoperability networks (CommonWell and Carequality alliance)
- Improve TCM billing conversions by having critical context about your patients' recent care events
- Avoid delays in waiting for clinical documentation for appropriate follow-up care
- Access Discharge Summaries when your patients are discharged from out-of-network facilities regardless of the treating facility EHR

Our Advantage:

More Access to Out-of-Network

Our extensive network allows for D/S from out-of-network hospitals, regardless of EHR, creating billable opportunities for TCM follow-up.

Within the Workflow

Care coordinators do not need to switch between different systems.

Parse Out Actionable Elements

Our neatly parsed-out view of the typical 40+ page D/S makes it more actionable.

Lower Care Team Burden

Prevent unnecessary phone calls or messages seeking additional info, saving time for the provider, hospital staff and patients.
