Radial | **Pings** A BAMBOO HEALTH SOLUTION

Bamboo Health

A Smarter Path to Post-Acute Care

Simplify population health by combining Real-Time Care Intelligence™ at the point of care with artificial intelligence (AI) clinical decision-making support modules.

Optimize Next Site of Care With Placement and Hospice Referral Modules

Placement
Reduce excess skilled nursing facility (SNF) and inpatient rehabilitation facility (IRF) stays, total length of stay (LOS) and readmissions
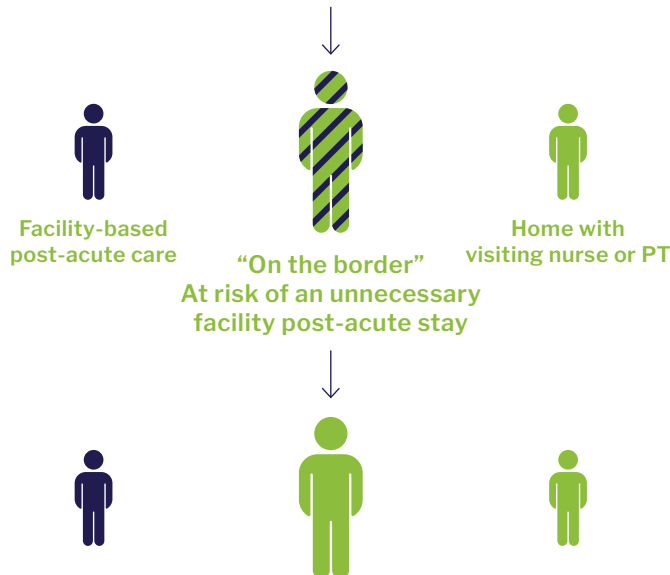

Hospice
Reduce unnecessary hospitalizations with early, appropriate referrals to hospice

Did you know?

- 15% of SNF utilization may be unnecessary

- $10,000 could be saved per SNF stay in favor of homecare

- $20,000 could be saved per IRF stay in favor of homecare

- 18 days is the median hospice LOS, despite the Medicare benefit covering 6 months, a metric that has not improved for 5+ years

Smart Placement identifies these hospitalized members

Facility-based post-acute care

"On the border" At risk of an unnecessary facility post-acute stay

Home with visiting nurse or PT

Safely shifts discharge dispositions in favor of homecare, reducing readmissions, total cost of care and hospital days

Case Study Results

19% — **19% reduction** in post-acute care utilization

24% — **2x rate** of referrals to hospice & **24% boost** in palliative consults

25% — **25% reduction** in 30-day readmissions

Improved Placement ROI of 6:1 and Hospice ROI of 9:1

Radial and Bamboo Health incorporate data from claims, social determinants of health information, electronic health record data and Pings™ admission, discharge and transfer data.

Ready to Turn Insights Into Action for Immediate Savings and Improved Care?

Generate cost-savings – Leverage AI for identification of patients who historically would have been discharged to SNFs or IRFs but could be safely discharged to a home health agency instead

Shorten hospital length of stay (LOS) – Identify patients who are great candidates for home-based care on day one of hospitalization to allow for initiatives like early mobilization and PT awareness

Strengthen post-acute care decision-making – Build consensus with clear explainer notes & data-backed patient journey recommendations

Determine next-best action – Sort patients by high-to-low actionability scores

Increase hospice referrals – Improve end-of-life decisions, reduce unnecessary medical utilization and improve quality of life for patients and families
