

FROM CHAOS TO CLARITY:

# Unifying Fragmented Care

“ I would encourage every [organization] to try and adopt something like the Bamboo Intelligence Hub. It will help people. It will save lives, and I think people will be a lot more satisfied with their work, because you can actually do the work you came to work to do. ”

- Director of Operations from a state Department of Substance Abuse and Mental Health

## How the Bamboo Intelligence Hub™ Works

### THE BAMBOO INTELLIGENCE HUB™ HELPS SOLVE FOR SILOED HEALTH SYSTEMS

The Bamboo Intelligence Hub ingests data from sources that have historically never spoken to each other: admission, discharge, and transfer (ADT) events from hospitals across multiple states; behavioral health referrals and bed availability from state systems and OpenBeds®; prescription history from state and interstate PDMP systems; justice-involved events including bookings and release data; crisis dispatch records; and social determinants of health from community partners like FindHelp, RoundTrip, and others.

**Each of these data streams together becomes a complete, streamlined picture. Bamboo Health seamlessly brings together siloed inputs for faster time to care and reduced admin burden.**
